Coding Challenge: Customer Segmentation

Analyze customer data and segment them based on spending behavior using **basic SQL clauses** like:

- SELECT
- WHERE
- GROUP BY
- ORDER BY
- CASE
- HAVING

Dataset: customers

Table Structure

```
CREATE TABLE customers (
   customer_id INT,
   customer_name VARCHAR(50),
   city VARCHAR(50),
   age INT,
   total_spent DECIMAL(10,2),
   number_of_orders INT
);
```

Sample Data

```
INSERT INTO customers VALUES
(1, 'Amit', 'Bangalore', 25, 12000, 5),
(2, 'Neha', 'Mumbai', 30, 45000, 12),
(3, 'Raj', 'Delhi', 22, 8000, 3),
(4, 'Sneha', 'Bangalore', 28, 60000, 15),
(5, 'Karan', 'Mumbai', 35, 20000, 7),
(6, 'Pooja', 'Delhi', 27, 15000, 6),
(7, 'Arjun', 'Bangalore', 40, 70000, 20),
(8, 'Meera', 'Mumbai', 23, 5000, 2);
```

Questions

- **Level 1: Basic Filtering**

  1. Show all customers from **Bangalore**
  2. Display customers with **total_spent > 20000**
  3. List customers aged between **25 and 35**

- **Level 2: Sorting & Aggregation**

  4. Show all customers sorted by **total_spent (highest first)**
  5. Find the **total revenue** generated
  6. Find the **average spending per customer**

- **Level 3: Grouping**

  7. Find total spending per **city**
  8. Count number of customers in each **city**

- **Level 4: Customer Segmentation (CORE TASK ⭐)**

  9.Count how many customers fall into each segment

- **Level 5: Advanced Basic (HAVING)**

  10.Show cities where total spending is **greater than 50000**
