

Coding Challenge : Built in Function Python

Remove Duplicates & Preserve Order

Concepts: set(), list, loop

Problem:

Given a list of student IDs, remove duplicates **without changing order**.

```
ids = [101, 102, 101, 103, 102, 104]
```

Expected Output:

```
[101, 102, 103, 104]
```

Frequency Counter (Real-time analytics)

Concepts: dict, get(), loop

Problem:

Count how many times each product is sold.

```
products = ["apple", "banana", "apple", "orange", "banana", "apple"]
```

Expected Output:

```
{'apple': 3, 'banana': 2, 'orange': 1}
```

Find Top Scorer

Concepts: max(), dict

Problem:

Find the student with highest marks.

```
marks = {"A": 85, "B": 92, "C": 88}
```

Expected Output:

```
B
```

Common Elements in Two Lists

Concepts: set(), intersection()

Problem:

Find common skills between two candidates.

```
skills1 = ["Python", "SQL", "Excel"]
```

```
skills2 = ["SQL", "Power BI", "Python"]
```

Expected Output:

```
['Python', 'SQL']
```

Sort Dictionary by Values

Concepts: sorted(), lambda

Problem:

Sort products by price.

```
prices = {"apple": 50, "banana": 20, "orange": 30}
```

Expected Output:

```
[('banana', 20), ('orange', 30), ('apple', 50)]
```
